Cover Letter

Dear Sir/Ma'am,

I'm applying for the [Job Title] position at [Company Name]. With a first-class BSc in Computer Science from King's College London, hands-on experience across Windows and Linux administration, and 127 completed labs on TryHackMe (top 2% globally), I'm well-placed to contribute from day one.

My technical background covers TCP/IP networking, Python and Bash scripting, PC building, and hardware-level troubleshooting. The ~115 hours of TryHackMe training spans network protocols, log analysis, DNS, disk imaging, and file recovery.

My professional background includes freelance investigative and analytical work — independently managing client briefs from scoping through to documented output, and communicating findings clearly to non-technical clients. Before that, I tutored primary and secondary school students in maths and contributed to executive-level strategy documentation for a healthcare initiative.

[Company Name]'s [brief alignment] makes it a strong fit for the direction I'm moving in, and I believe my technical foundations and independent working style would translate well to this role. Thank you for taking the time to review my application.

Many thanks,
Matthew Beardwell
