Cover Letter

Dear Sir/Ma'am,

I'm applying for the [Job Title] position at [Company Name].

I have a first-class BSc in Computer Science from King's College London and am currently ranked in the top 2% globally on TryHackMe, completing 114 hands-on labs (100+ hours). Over the past few years I've conducted real-world OSINT investigations for clients, traced identity and geolocation from anonymised public data, and built a TCP port scanner using multiprocessing with banner grabbing and file output. My thesis developed a proof-of-concept mimicking evasive malware behaviour via process memory patching.

My technical work covers digital forensics — disk image recovery, file carving, and artefact extraction in both lab and real-world contexts — as well as OSINT, reverse engineering, and scripting in Python, Bash, C, and ARM Assembly. I also authored a UK-focused OSINT toolkit that was featured by a 27k-subscriber channel. I'm currently completing CompTIA Security+.

[Company Name]'s [brief alignment] is a good fit for the kind of work I want to be doing, and I hope you'll agree it's a strong match. Thank you for taking the time to review my application.

Many thanks,
Matthew Beardwell
