

# Matthew Beardwell

Watford, Hertfordshire · [mbeardwell.com](https://mbeardwell.com) · [contact@mbeardwell.com](mailto:contact@mbeardwell.com)  
[LinkedIn](#) · [GitHub](#) · [TryHackMe](#)

## Professional Summary

SOC Analyst Trainee with hands-on cybersecurity experience and a First-Class BSc (Hons) in Computer Science. Skilled in OSINT investigation and threat profiling, now applying these skills toward SOC and threat intel workflows. Ranked in the top 2% globally on TryHackMe (115 completed rooms, 17 badges).  
Currently preparing for CompTIA Security+ to strengthen knowledge in alert triage and open-source threat research to support SOC and risk operations.

## Technical Skills

- **Security and Threat Detection:** SIEM (Splunk), Sysmon, Windows Logs, OSINT
- **Scripting and Programming:** Python, Bash, PowerShell, C, ARM ASM
- **Systems Admin:** Group Policy, Linux Hardening, Virtualisation
- **Incident Response:** Wireshark, TCP/IP, Firewalls

## Cybersecurity Projects

- ActiveReconLite** · *Python Port Scanner* FEB 2025 – MAR 2025  
Built a Python-based TCP connect port scanner using multiprocessing. Scanned 65k ports in 5s (vs Nmap's 5m). It validates user input, grabs banners, and writes results to a file. Demonstrates automation, socket programming, and parallel scanning. [github.com/mbeardwell/active-recon-lite](https://github.com/mbeardwell/active-recon-lite)
- Location and Identity Resolution from Minimal Public Signals** · *OSINT Case Study* APR 2025  
Tracked real-world identity from anonymised YouTube uploads using public data. Shows attacker thinking, threat profiling, and privacy risk awareness. Demonstrates threat intelligence process fundamentals: collection, enrichment, analysis, and attribution based on minimal public indicators. [github.com/mbeardwell/osint-i3-case-study](https://github.com/mbeardwell/osint-i3-case-study)
- Faster Dynamically Instrumented Programs** · *Bachelor's Thesis* OCT 2022 – MAY 2023  
Built a runtime patching tool on ARM Linux to redirect processor instructions in memory. Mirrors techniques used in evasive malware – useful for SOC detection and threat hunting. [github.com/mbeardwell/arm-fp-emu](https://github.com/mbeardwell/arm-fp-emu)

## Professional Experience

- Building expertise during ongoing health recovery. Not currently available for roles. Open to future opportunities.*
- SOC Training and Labs** · *TryHackMe (Self-Led Learning)* FEB 2022 – PRESENT  
Developed hands-on expertise in SIEM and security automation through 115 cybersecurity labs (Top 2% globally). Applied log analysis, detection logic, and SOC tooling in simulation labs.
- Private Tutor** · *Freelance* SEP 2016 – NOV 2019  
Supported children with pre-GCSE homework, primarily in maths; adapted explanations to varying ability levels in informal settings.
- Research and Documentation Intern** · *Indo UK Institute of Health* JUN 2017 – AUG 2017  
Conducted market research on employee benefits and strategic partnerships, providing executives with key insights. Edited and reformatted high-level strategic documents that shaped discussions on a billion-pound health-care initiative.

## Education and Certifications

|                                                     |                                          |                     |
|-----------------------------------------------------|------------------------------------------|---------------------|
| <b>BSc (Hons) CS</b> · <i>King's College London</i> | 1st Class                                | SEP 2018 – JUL 2023 |
| <b>A-Levels</b> · <i>King's Maths School</i>        | A* A* A* A*                              | SEP 2016 – JUL 2018 |
| <b>Certifications</b>                               |                                          |                     |
| CompTIA                                             | Security+                                | (IN PROGRESS)       |
